Definitions

**Park** shall be defined as a municipally owned property that has been identified in the Parks Plan Inventory in the Parks Plan Update 2009, that has an associated development/maintenance strategy either for current or future use, and is designated Park by Council in the Parks By-law.

**Park Holding** shall be defined as an undeveloped parcel of land that has been acquired by the City as part of a parkland dedication through a Planning Act Application and that has not been developed, named or designated the Parks By-law.

**Open Space** is defined in the City of North Bay's Zoning By-law as follows:

- **Permitted Uses:**
  
  No land, building or structure shall be erected or used, or caused to be erected or used in any Open Space (0) zone, except for one or more of the following uses; cemeteries, conservation areas, exhibition building, golf courses, local recreational facilities, museums and historical sites, private open spaces, public and private parking, rinks and skating facilities, ski clubs, sporting fields and courts and buildings or structures accessory to the foregoing.

- **Regulations:**
  
  In an Open Space (0) zone no building, structure or land shall be used, or caused to be used, and no building or structure shall be hereafter erected or altered, or caused to be erected or altered in accordance with Zoning By-law 28-80.

**NOTE:** Open spaces are referenced throughout this document for the purpose of comprehensive planning where open space lands and parks abut each other. Open space policy is contained within the Official Plan and is regulated by way of the Zoning By-law.
1.0 Introduction

1.1 Purpose of the Parks Plan Update
The enlarged City of North Bay drew together three municipalities, North Bay and the former Townships of West Ferris and Widdifield in 1968, which had uncoordinated parks plans. Since amalgamation, the City of North Bay has continued to improve upon the location and strategic placement of parks\(^1\) within the community. This has led to the creation of one overarching plan – the Culture, Recreation and Parks Master Plan (1991).

The purpose of this update to the Parks Master Plan component is to assess the City's progress since the creation of the original plan, while bringing about new strategies for improvements. The primary objective will be to consider potential opportunities for the development of parks over the next \textbf{five years}.

The Parks Plan Update 2009 will review the current supply of park area and relation to current planning district populations. To provide a benchmark, the results will be compared to other Ontario communities as well as recognized sustainable community standards. The results of the Sustainable Community Advisory Committee and Parks Planning Charrette are also discussed, identifying the major concerns and suggestions of the represented public. Lastly, the plan will then outline an action strategy based on short, medium and long term objectives.

1.2 How this Plan is Used
This Plan will be used by both City Council and City staff when developing the objectives for parks and open space in the community. Throughout this Plan, Parks are analyzed both from a qualitative and quantitative perspective, and based on a staff review and the comments received from the community, an action strategy has been developed. The Action Strategy, found in Section 6.0, sets out the short, medium and long term goals for the Parks within the community. This Action Strategy will assist both City Council and Staff to

\(^1\) See definition of Park on Page 2 of this Plan
plan for fiscally responsible park growth and management, including capital works. The Plan will be implemented through the Action Strategy developed, and will be dependent on the financial resources of the City. The Action Strategy will be reviewed in conjunction with this Plan.

2.0 The Planning Context

2.1 Introduction
The future development and maintenance of parks is impacted by a number of conditions and variables, most importantly socio-demographic trends. Socio-demographic trends influence the demand for park services and facilities, as well as leisure programs held within the community. Moreover, they significantly affect the way people spend their time and have implications for the preferred use of free time. Changes in socio-demographic factors such as population, age structure, household make up and work patterns are reflective of this.

2.2 Demographic Trends
The total population of the City of North Bay, based on 2006 Census figures, is 53,966. The largest proportion of the population lives in West Ferris (22.2%), followed by the Old City, with 17.9% of the City’s population (see figure 2.1).

---

Figure 2.1

North Bay Population By Planning District

- Old City: 18%
- Pinewood: 11%
- West Ferris: 23%
- Rural: 6%
- Airport Heights: 8%
- Cedar Heights: 6%
- Central Business District: 9%
- Circle Lake: 7%
- Laurentian: 12%

Figure 2.2 illustrates the age structure of the City of North Bay in comparison to the provincial composition. Relative to the population of Ontario, North Bay has a slightly higher median age. The largest proportion of people lie in the 40-49 years range which, along with fewer people within the 0 to 24 age cohorts, displays signs of aging.

Figure 2.2

Comparison of Age Characteristics in North Bay and Ontario
Population in North Bay has experienced a net increase in the last 10 years, with the population declining between 1991 and 2001 by more than 2600 people, and increasing since 2001 to our current population. Projections made by Watson & Associates Economists Ltd. (2009) estimate that population will continue to increase gradually, reaching 56,475 by 2031. This is due to improved employment conditions, combined with positive in-migration. The City reached its peak population in 1991 the same year the Parks Master Plan was completed. The population in 1991 was 55,405. Therefore, the population forecast represents an increase in population of 1,070. This relative slow population growth will not create an extensive demand for new park area and will have an affect on demand for leisure services, facilities, parks and programs for the foreseeable future. The City should monitor population demographics and adjust their recommendations to represent any changing demographics not predicted.

2.3 Social and Leisure Trends

In keeping with North American and Provincial trends, North Bay is experiencing an aging population structure. The aging community will likely continue as the proportion of residents aged 25-44 move up through the age brackets.

The Watson & Associates Economists Ltd. report notes:

As of 2006, the 55+ population in North Bay represented approximately 28% of the City's population base. This percentage is forecast to increase considerably to approximately 33-35% (or 1/3) by 2031.5

In addition to this, the proportion of migrant seniors has increased from -4% to 15% over the 1991-1996 to 1996-2001 period. This suggests that the demand for housing development and municipal facilities for this demographic group has been strong over the 1996 to 2001 period, and is predicted to continue within the upcoming years.6 Planning staff confirm that new developments are increasingly aimed at this demographic.

Trout Lake Waterfront
The characteristics of the older adults are also changing. They no longer comprise of a largely homogeneous group. Instead, this segment of the population includes the younger and older members, whose needs and interests are different. In response to these changes, the City may consider providing for such interests within parks and leisure services that meet their diverse needs.

Another socio-demographic trend is that of rising obesity, specifically in the youth of North Bay. The Healthy Active Living Report\(^7\) that was completed in February of 2007 for the City of North Bay suggests that “the study area, [North Bay], compares unfavourably to provincial figures on almost all health indicators”. This includes, diabetes; high blood pressure; percent of people who smoke; those who are limited in terms of home, school, work or other areas due to mental, physical or health problems; obesity in adults and youth; leisure time and physical activity; as well as the consumption of daily fruits and vegetables. The report findings suggest a need for interventions to improve the quality of health among area residents. The Healthy Active Living Report identifies a positive relationship between opportunities and physical activity patterns of adults. Therefore, parks should be built in ways that recognize the needs and interests of community residents. They must also offer choices to suit the different ways people use the resource.

Walking has been identified as one of the most common physical activities among people of all ages, cultures, incomes and abilities. Studies suggest that people want to walk more. Parks trails and greenways are a low cost resource to users and enable people to walk more. They provide opportunities for physical activity that is close to home and encourage walking by connecting community destinations such as work, school and shopping areas.

---

\(^7\) The Healthy Active Living Report is available on the City’s website or by contacting the Parks, Recreation and Leisure Services Department.
3.0 Parkland Standards

3.1 Sustainable Community Standards

The parkland standards listed in *Land Use Made Plain* have been used for sustainable community standards and are also used as guidelines for park supply. They outline six categories of parkland types which relate to our parkettes, neighbourhood park/playground, district park, city wide park, linear park or trail. Table 3.1 demonstrates how each are defined and standardized.

Although the scale of park types is generally not conducive to North Bay, these standards are referenced as a tool for the purposes of this study.

Based on Table 3.3, North Bay far exceeds the general standards for Ontario communities. The standards within the 1991 Parks Plan exceed sustainable community planning practice standards and other Ontario communities parkland standards.

The City should continue to apply parkland standards appropriately to ensure there is a suitable supply of parkland within the community.

<sup>12</sup>City of Greater Sudbury. *Official Plan* *does not take into account school properties, Jason Ferrigan, Senior Planner*

<sup>13</sup>Peter Tonazzo, *Planner in Sault Ste. Marie*

<sup>15</sup>Janet Rooney, *Planner in Timmins*
4.0 Inventory

4.1 Introduction
To assess whether the current standards are being met, an inventory has been created (Appendix A) and is summarized here by park type and by planning district to analyze the standards individually.

4.2 The City as a Whole
Parkland in North Bay has been accumulated for many years through the five percent parkland dedication that take place prior to subdivision registration. The City normally obtains parkland in consultation with the developer of the new subdivision that where possible, is adjacent to or can connect easily to current and proposed parkland. The City can also use this tool to acquire additional parkland in areas of the City where it is deficient, or to protect significant natural features.

Analyzing the City’s current parkland allows the opportunity to assess whether or not the parkland standards outlined in Table 3.2 are being achieved. The parkland standards provide a guideline against which the City can monitor the amount and type of parkland provided around the community. By monitoring the standards, the City is able to help identify where parkland may be required. For the purpose of this Plan, privately owned lands (with the exception of school properties) are not included.

Since the development of the 1991 Parks Master Plan and the development of the City's Official Plan in 1973, the City has recognized the historical use of school properties in the provision of parkland in the Community.
This historical incorporation of school properties into the City’s inventory of available park acknowledges that these properties are used by the surrounding neighbourhood for recreational purposes. This Plan continues to account for school properties throughout the community in comparison of available parkland for each type of park category. The City has negotiated a Facility Use Agreement with the four School Boards so that neither school boards nor the City duplicate efforts towards the provision of sports fields and playgrounds.

The City has divided up parkland in six separate categories; parkettes, neighbourhood, district, city wide, trails and linear parks and park holdings. Each is defined and discussed subsequently. Each park within the City of North Bay has been given a classification based on the four types of parks identified below for the purpose of this update. It is important to note that many parks across the community actually fall within more than one classification. Parks such as the City’s Waterfront or Armstrong Park serve as City Wide Parks, but they also act as district and neighbourhood parks for the residents in the surrounding neighbourhoods. Throughout this report, Parks have been classified based on their broadest use.

**4.2.1 Parkettes**

Parkettes are defined as a small area of land used for aesthetic purposes (visual relief) and/or passive recreation. The area may be part of a large park area. Ideally, they are associated with city monuments, fountains and ornamental pockets of lands (floral beds). They are usually located at street intersections and along major corridors.

</tbody>
</table>

There are currently 12 parkettes in North Bay, each of which is located along street intersections and major corridors. The 1991 Parks Plan has no minimum requirement for parkettes however it is suggested that the general size should be less than 0.5 hectares.

#### 4.2.2 Neighbourhood Parks

Neighbourhood level parks and recreational facilities should be designed to accommodate neighbourhood interest preferences. Where there are young families and/or senior citizens in an area, facilities and programs should be tailored more specifically to the particular needs of these groups.

Neighbourhood parks are typically centrally located within safe and convenient walking distance of the majority of neighbourhood residents (optimum service radius is 400 metres or a 5 minute walking distance). Where possible the park should be designed with street frontage for visibility and safety, and be coordinated with

*Graniteville Playground*
elementary school sites. Neighbourhood parks should be a sufficient size to accommodate a variety of recreational facilities to avoid duplication. These may include sports fields (baseball, softball, soccer and football), outdoor rinks, neighbourhood centres, playground equipment, paved areas for informal games, shaded areas for passive recreation, and facilities for parents and guardians.

In total, there are 32 neighbourhood parks along with 28 school sites which contribute to the neighbourhood parks total. The neighbourhood parks are listed in Table 4.2 and Table 4.3 below.

For the purposes of this update the City's most recent population is compared to the 1.0 hectare per 1000 population standard. Based on the 1991 Parks Plan parkland standards and population data, the City of North Bay should have 53.97 hectares of neighbourhood parkland.\textsuperscript{16} North Bay generally meets this standard without including school properties. The City of North Bay has formalized agreements with the four local district school boards (Facility Use Agreement) as part of the community use of schools initiative by the Provincial government, to utilize School Board outdoor and indoor facilities. Table 4.3 lists the school properties, which are considered in the neighbourhood level park calculations.

The total of school-owned and City-owned neighbourhood parkland together is 102.48 hectares. With the current neighbourhood park standard being 53.97 hectares, the City of North Bay together with school properties exceeds the 1 hectare /1,000 population standards by more than 48 hectares.

#### 4.2.3 District Parks

District parks accommodate the social, cultural, educational and physical activities of particular interest to several neighbourhoods (i.e. planning district) with the major emphasis on facilities for organized sports and other competitions. Smaller areas should be set aside for landscaping and passive recreation. District parks are typically located in a manner which is reasonably central to the service population and directly accessible by public transit, automobile and bicycle (optimum service radius is 1.6km or a 20 minutes walking distance). Frontage on a major traffic route is desirable with facilities provided for off-street parking.
The parks should be developed as focal points for organized and non-organized team sports, athletic activities and casual recreation. This requires the provision of fairly expensive and sophisticated facilities. These may include regulation size and non-regulation size softball and baseball diamonds, football and soccer fields, track and field areas, night lighting and spectator facilities, swimming pools, arenas, major playgrounds and community centres. There are a total of seven district parks within the limits of the City of North Bay (Table 4.4).

The guideline listed in the 1991 Parks Plan is 1.6 hectares per 1000 population. Therefore, the City should have 86.35 hectares dedicated to district parks. Table 4.5 identifies the intermediate and secondary school sites that are considered district level parks.

With intermediate and secondary school properties combined with municipally owned parks, the City of North Bay has 99.141 hectares dedicated to district parks. Based on park current standards, North Bay exceeds the suggested 85.38 hectares of district parkland.

4.2.4 City Wide Parks

City wide parks are developed for the enjoyment of a diversified population including individuals, family groups and community organizations. Opportunities for both active and passive recreation, social and cultural activities, and the conservation and preservation of natural environment areas, historic sites and wildlife habitats should be encouraged at this level.

City wide parks are generally distributed throughout the municipality and readily accessible by means of public transit, private automobile and trail access where viable. Secondary means of public access in the form of pedestrian walkways and bicycle paths are also desirable. City wide parks should be multi-purpose in design or contain specialized uses. Multi-purpose parks often offer a wide range of recreation opportunities such as swimming, boating, picnicking, hiking and areas for active play.
Table 4.6 identifies all 21 municipally owned city wide parks found within the boundaries of North Bay. The standard according to the 1991 Parks Plan is 5.2 hectares/1000 population.

Based on the 1991 Parks Plan standards, the minimum guideline for City Wide parks in North Bay is 294.90 hectares. The City’s standards have been surpassed by 277.87
hectares. Even when school property is excluded from the City wide parkland calculation, North Bay well exceeds the current standards.

**4.2.5 Trails and Active Transportation**

North Bay provides a wide variety of walking and biking paths which are also referred to as linear parks. North Bay currently has two designated paved trails; the Kate Pace Way and the Kinsmen Trail. Table 4.8 lists the estimated distance of each which are not included in the City Wide Parkland calculation. Both paths bisect the City and connect to other trails to provide linkages to a variety of park, residential and commercial areas.

In addition to these two paved trails, many City parks include trail systems that connect neighbourhoods and other parkland. The estimated distance for these trail systems are included in Table 4.8 as Parkland Trails.

Within the municipality there are varieties of types of trails that serve a wide cross section of users. Not all trails are owned by the municipality. Many are owned and operated by community organizations but contribute to the overall inventory of trail available to the community none the less. These include trails systems such as Nordic Ski Trails, snowmobile trails, Laurier Woods Trails, Education Centre Trails as well as trail systems owned by the North Bay, Mattawa Conservation Authority.

North Bay has an established Trails and Active Transportation Committee that is made up of Municipal representatives and key trail partners. This committee has the responsibility to develop a ‘Trails and Active Transportation Master Plan’ for the City of North Bay and oversee its implementation and ongoing development. This Committee works in partnership with local and regional trail organizations as well as community trail users.

Ongoing initiatives include parkland trails development, as well as the concept of active transportation which expands beyond traditional trails to include urban non-motorized transportation corridors such as sidewalks and bike routes.

The Committee has drafted a plan that identifies prioritized trails and active transportation initiatives. These initiatives as well as new ones are reviewed and considered as part of the Capital budget process on an annual basis. (See Appendix E for the Trails and Active Transportation Strategy)
4.2.6 5% Parkland Holdings

Through the subdivision development process, the City often acquires lands for future parkland use. The Planning Act provides the option to either acquire a portion of the private lands being developed or receive a cash contribution in lieu of the parkland. These lands, known as 5% parkland dedications are the preferred option where additional property will be required in the district to maintain an appropriate level of parkland and when the subject properties are suitable. When lands are acquired through subdivision growth, the City undertakes a planning process, which includes public consultation with neighbourhoods, to determine the appropriate long term development plan for the 5% parkland holdings. The existing 5% parkland holdings have unique maintenance strategies and are at varying stages of development. For purposes of this study these holdings have been calculated by category and planning district. Future 5% parkland dedications, as identified through approved draft plans of subdivision, are considered when assessing standard parkland requirements and future requirements but were not included in the existing parkland calculations.

4.2.7 Parkland Summary

The City of North Bay is surpassing the 1991 Parks Plan standards, as can be seen in Table 4.8a below.

4.2.8 Other Private Parkland Opportunities

It is also important to note that there are many undesignated properties that serve as parkland not mentioned within the inventory, including both publicly and privately owned land not within the control of the City of North Bay. This includes areas such as Laurier
Woods, Laurentian Ski Hill, the Escarpment, Department of National Defence land, and the Nordic Trails, which are parks and open spaces that are widely used by the public. As referenced in Table 4.8b, there are an additional 204.38 Ha of non-municipally, publicly owned lands within the settlement area available for recreational use, which if included in the calculations, North Bay would further exceed parkland standards for those districts.

<table>

<td>46.5</td>
</tr>
</tbody>
</table>

This undesignated parkland contributes immensely to the City Wide and district park total area, even though it is not being taken into consideration for the purpose of this report. When making final assumptions about meeting current standards and sustainable community standards, this should be taken into consideration. Table 4.9 illustrates the amount of parkland needed within the City of North Bay to surpass the sustainable community standards referenced in Table 3.1.

17 It is also worth noting the unique partnership agreement between the City and Heritage North Bay to develop a central park concept to link the waterfront and downtown core. The Community Waterfront Park concept, when developed, will provide not only the Central Business District, but the entire city a four season park and recreation resource connected to the City’s waterfront park.
Table 4.9

* at low end of range

The above deficiencies shown on table 4.9 are more than offset by opportunities at City Wide Parks and plans to achieve these standards have been identified in the Action Strategy in Section 6.0 of this Plan.

4.3 Analysis By Planning District

By looking at planning districts individually the City will be able to analyze, at the neighbourhood level, future considerations for parkland and recognize potential opportunities for linkages regarding trails and active transportation routes. Qualitative suggestions and comments received by the Sustainable Community Advisory Committee and the public during the Parks Planning Charrette are incorporated within this section, as well as Appendix C to this Plan. Table 4.10 shows the population within each district. West Ferris and the Old City are the most populated planning districts within North Bay.

#### 4.3.1 Public Participation

Through the preparation of the City’s New Official Plan, a Sustainable Community Advisory Committee (SCAC) was developed, with representatives from social, environmental and economic sectors in the community. The SCAC, with the assistance of a consultant, prepared a report which identified over 100 principles related to the future growth and development of the City. The principles developed have been considered in the development of the New Official Plan and this Plan. Appendix B contains the principles developed by the Sustainable Community Advisory Committee, as it relates to Parks and Open Space.

In addition to the valuable work completed by the Sustainable Community Advisory Committee, a full day Parks Planning Charrette was on June 14\(^{th}\), 2008. During the Charrette, the existing inventory of parks, open space and trails were presented and based on this information the public was asked to develop potential new park and open space concepts for each of the nine planning districts. The purpose of the Parks Planning Charrette was to acquire a better understanding of local interests related to parks and open spaces.

\(^{18}\) Secondary Planning Districts Data, August 2005
The work that the participating members provided was extremely beneficial to the City, and is presented within a separate document titled *Parks and Open Space Planning Charrette Report 2008*, found in Appendix C. The information collected is organized by separate planning districts to allow for more detailed suggestions to be presented. General concepts are also offered, which represent repeated suggestions.

The information contained in Appendix B and C has been considered in conjunction with the analytical inventory prepared by staff, which is outlined below.

### 4.3.2 Planning District Analytical Inventory

Table 4.11 and Table 4.12 show comparisons of parkland area within each planning district and the difference between existing and recommended parks according to the 1991 Parks Plan.

</tr>
</tbody>
</table>

¹⁹ School properties and existing Parkland holdings are included in total.
Based on the above analysis, those districts that are less population (as seen in table 4.10) have the largest amount of existing park area. It should be noted that the Cedar Heights Planning District includes the Education Center trails and green space with a total of 107.22 of the 118.26 hectares indicated. Airport Heights and Pinewood have the least amount of parkland followed by the Central Business District (CBD).

The CBD has a low amount of neighbourhood parkland within its district considering its high population density. This is not unusual due to its long history of development well before parkland standards and opportunities to acquire public spaces through tools like the Planning Act existed. The realization of the Community Waterfront Park and underpass to the North Bay Waterfront Park will offset the current deficiency.

It is recognized the CBD is largely hard surfaced. The City proposes to continue its urban forestry program practices (i.e. Main Street, Oak Street, Cassells Street and Third Avenue). Further street scaping and parkette development is planned for Algonquin Avenue, the Richardson Fountain Parkette and Leger Square at City Hall. Development of new parkette spaces will also be considered as opportunities arise.

It is anticipated that the Cedar Heights and Airport Heights planning districts will be the focus of a majority of the City’s population growth over the next 20-25 years. In some cases, there are subdivision developments planned for these areas, which will increase the amount of parkland through parkland dedication under the Planning Act. As these draft plans have not been registered yet, the City has not been granted ownership of these lands.

There is a high proportion of City Wide parkland in North Bay, which is accessible to the entire community. City Wide Parks should be readily accessible by public transit, trails and automobile. Many of the City’s City Wide Parks also serve the neighbourhood park function as well as does Champlain Park with its children’s playground.

The planning districts are also served by other parkland and recreation facility providers including the publicly and privately owned Laurentian Ski Club, the North Bay Mattawa
Conservation Authority lands, the recreation facilities provided by the Department of National Defence (DND), Laurier Woods Park and Nordic Trails.

The nine (9) planning districts will require further detailed planning by staff and the neighborhoods as development opportunities present themselves. Please see the attached Planning District Maps (Schedules 1-9) showing the existing and the preliminary proposed park land for each planning district.

</table>

The results from this table show that North Bay offers a significant amount of parkland to its residents. In terms of providing additional parkland, one of the challenges that will need to be addressed is finding additional parkland opportunities within the older built up planning districts (Old City, Pinewood) that will serve the present and future demographics.

---

20 School properties and existing Parkland holdings are included in total.

21 Proposed future 5% Parkland Dedications as outlined by current approved draft plans of subdivision.
5.0 Key Findings/Observations

In terms of the preceding information, there are a number of key findings and observations that are outlined below, which form the basis of the Action Strategy in Section 6.0 of this Plan.

5.1 A Growing Population
Since the population is projected to grow slowly in North Bay over the next thirty (30) years, suitable park supply should continue to be added appropriately to the City's parkland total. With the current parkland total exceeding the 1991 Park Plan standards, it is important to recognize that the City faces parkland challenges and opportunities within each planning district that are not solely based on park size, type and number. The City will continue to cultivate relationships (programming, maintenance) with other providers like the four School Boards, Conservation Authority and YMCA. The Parkland Action Strategy in Section 6.0 outlines the policies, goals and objectives to assist moving forward these park challenges and opportunities.

5.2 An Aging Population
The aging population in the City of North Bay is growing and it is expected to represent approximately 33% of the city's total population by 2031\textsuperscript{22}. Planning for this demographic shift is necessary. There has also recently been an emphasis on the need to differentiate between seniors; more specifically those who enjoy a more recreational type of living, compared to those who may be more dependent on care and service. This should be taken into consideration and implementation strategies should be created to address this concern.

\textsuperscript{22} Watson & Associates Economists Ltd. (2009) City of North Bay Population, Housing and Employment Forecast Update 2006-2031
5.3 Neighbourhood Parks
Another observation was the need for more neighbourhood parks in two of the older planning districts. This will pose a challenge due to their built up nature and sufficient land availability. The City’s Parks and Recreation Department will continue to meet with both established and new neighbourhood groups to discuss their Neighbourhood Park requirements, provide design workshops and programming needs. Neighbourhood Parks are designed to address the changing demographics and accessibility issues.

The City provides capital funding for playground improvements through the Five Year Capital Budget and encourages financial assistance from service clubs and other funding agencies.

5.4 District & City Wide Parks
The City of North Bay meets the requirements for District and City Wide Parkland, when combining both City-owned and School Board owned lands, based on the current population when using the standards created in the 1991 Parks Plan. However, the Parks and Recreation staff have indicated that there is a need for more soccer and ball fields to meet current and future demands. The need for a sport complex to house these fields and address consolidation efficiencies was recommended in the 2005 City Sport Field Study. The land acquisition and complex design is scheduled for 2009.

5.5 Meeting Sustainable Community Standards
Since the City of North Bay’s is currently gauging its parkland standards based on the standards developed in the 1991 Parks Master Plan, the City could benefit from upgrading the guideline to be inclusive of different types of environments and parks, similar to the Sustainable Parkland Standards outlined in Table 3.1.

As the City is currently surpassing its 1991 Parks Plan standards, changing the standards to reflect those of sustainable communities would be further improvements towards a healthier community. The City would be demonstrating how innovative strategies can
produce a community that is more environmentally sound, economically prosperous, and attractive.

5.6 Trails and Active Transportation
Under the City’s current Trails and Active Transportation plan initiatives are identified that facilitate people using alternative forms of transportation to access various areas within the City. The City will continue to review opportunities to develop trails, walkways, and bike routes that connect people to parks, schools, and business and promote alternate transportation forms. This strategy supports healthy active living and a healthy environment.

5.7 Abandoned Schools
Undeveloped and developed school board properties are recognized for the role they play in the provision of parks, open space and indoor facilities to the community at large. Should a school board property be offered for sale, the City will review this Plan to determine if the property or portion of the property is required for park, open space or other municipal purposes. The City cannot guarantee that school board properties will be available for the long term in public ownership. Should the ownership of school properties become available; the City will consider the need of parkland in that particular neighbourhood. The purchase of the property would be based on Parks funding available for both land costs and the ongoing property maintenance cost.

5.8 Financial Implications
Any financial implications related to ‘Action Strategies’ indicated in this Parks Plan Update (i.e. park land purchase, new development and or improvements) will flow through the City's established Operating and Capital Budget process.

**PARKLAND INVENTORY**

Revised April 2009

W:\PLAN\OFFICIALPLAN\PARKSPLANUPDATE\PPU2009\AppendixA-prksinv
**Identification:**
- **Type:** District Park
- **Area:** 0.97 Ha
- **Owner:** City of North Bay
- **Location:** Airport Heights

**Maintenance Strategies:**
- Grass cutting contracted to others paid for by City Parks Department.

**Program & Community Development:**
- Needs long range plan for management of artifacts and maintenance of the grounds.

---

**Aerospace Defense Park**
Concession A, Part Lot 16, RP36R-10359, Parts 16 & 19, Part Parcel 18726 W/F
Airport Lookout Park
Part Lot 19, Concession “B”

Identification:
- Type: City Wide Park
- Area: 1.24 Ha
- Owner: City of North Bay
- Location: Airport Heights

Amenities/Description:
- Parking, Benches, Picnic Tables
- Million dollar view of the City

Maintenance Strategies:
- Escarpment Trail linkage
- Upgrade hard and soft landscaping
- Forestry Plan
- Review dusk to dawn lighting

Program & Community Development:
- Great opportunity for a descriptive sign describing the City and the view
- Perhaps a looking glass standard
- Requires an entrance identification sign
Fricker Wallace Park
Block “A” Plan M-312

Identification:
- Type: Neighbourhood Park
- Area: 1.17 Ha
- Owner: City of North Bay
- Location: Airport Heights

Amenities/Description:
- It has been left in its natural state as requested by the neighbourhood, similar to Kennedy Park

Maintenance Strategies:
- Forestry Plan required
- Requires management plan
Identification:
- Type: Neighbourhood Park
- Area: 2.48 Ha
- Owner: City of North Bay
- Location: Airport Heights

Amenities/Description:
- Building – Skate change room and washrooms
- Supervised outdoor rink – lit
- Jr. and Sr. play equipment
- 70% natural area with trails

Maintenance Strategies:
- Trail maintenance Plan
- Forestry Plan required

Greenhill Park
Block “B” M-270, M-485 & Block “A” M-285, M-315
251 Pearce St
Kenwood Hills Hills Playground
Plan 36M580 Blocks 45-49

Identification:
- **Type:** Neighbourhood Park
- **Area:** 1.01 Ha
- **Owner:** City of North Bay
- **Location:** Airport Heights

Amenities/Description:
- Play Equipment - Junior

Maintenance Strategies:
- Forestry Plan required
- Trail plan required as connecting properties develop with new subdivisions.
Joint Agreement with City of North Bay and School Boards in order to access indoor and outdoor facilities. This will maximize the beneficial use of these properties while ensuring their maintenance as well. Expires June 21st, 2011
CEDAR HEIGHTS
PLANNING DISTRICT
**Identification:**
- **Type:** Neighbourhood Park
- **Area:** 0.89 Ha
- **Owner:** City of North Bay
- **Location:** Cedar Heights

**Amenities/Description:**
- Open Play Area
- Basketball Pad
- Senior Playground equipment (2006)

**Maintenance Strategies:**
- Possible future outdoor rink site
- Basketball pad relocation

**Program & Community Development:**
- Neighbourhood meeting established new park design for playground equipment (replaced 07/08)

---

**Belleview Park**

Block “B” and Part Block “A”, Plan M-480

20 McGibbon St
Identification:
- **Type:** City Wide Park
- **Area:** 6.81 Ha
- **Owner:** City of North Bay
- **Location:** Cedar Heights

Amenities/Description:
- Buffers the escarpment from further building

Maintenance Strategies:
- Tree survey/diagnostic required for maintenance program

---

**Escarpment Property**
Identification:
- **Type**: School Property
- **Area**: 2.24 Ha
- **Owner**: Nipissing Board of Education
- **Location**: Cedar Heights

Information:
- Special agreement for ball field maintenance and use

Joint Agreement with City of North Bay and School Boards in order to access indoor and outdoor facilities. This will maximize the beneficial use of these properties while ensuring their maintenance as well.
Expires June 21st, 2011
**Identification:**
- **Type:** School Property
- **Area:** 107.22 Ha
- **Owner:** Canadore College Board of Governors
- **Location:** Cedar Heights

**Amenities/Description:**
- City use of Duchesne Trail Network
- Investigating other agreements (property, student placements, etc.)
Identification:
- **Type:** School Property
- **Area:** 1.01 Ha
- **Owner:** Nipissing/Parry Sound Board
- **Location:** Laurentian

Joint Agreement with City of North Bay and School Boards in order to access indoor and outdoor facilities. This will maximize the beneficial use of these properties while ensuring their maintenance as well.

Expires June 21\textsuperscript{st}, 2011
PINEWOOD
PLANNING DISTRICT
Identification:
- **Type:** Parkette
- **Area:** 0.07 Ha
- **Owner:** City of North Bay
- **Location:** Pinewood

Amenities/Description:
- This monument commemorates the Algonquin Regiment
- New sod and walkway 2008

Maintenance Strategies:
- Regular turf and walkway maintenance

Algonquin Regiment Memorial
**Identification:**
- **Type:** Parkette
- **Area:** 0.02
- **Owner:** City of North Bay
- **Location:** Pinewood

**Amenities/Description:**
- Small green space

**Maintenance Strategies:**
- Provide deciduous plant material at center of turf area

**Bloem & Jane Street Parkette**
Bourke Playground
Lots 307-316, 320-323, 429-433, and Parts of Lawson and Lavery Streets, Plan 78
849 Beattie St

Identification:
- **Type**: Neighbourhood Park
- **Area**: 0.63 Ha
- **Owner**: City of North Bay
- **Location**: Pinewood

Amenities/Description:
- Building – meeting, change rooms, washrooms
- Skating Oval
- Parking

Joint Agreement with City of North Bay and School Boards in order to access indoor and outdoor facilities. This will maximize the beneficial use of these properties while ensuring their maintenance as well.
Expires June 21st, 2011
Joint Agreement with City of North Bay and School Boards in order to access indoor and outdoor facilities. This will maximize the beneficial use of these properties while ensuring their maintenance as well.
Expires June 21st, 2011
Chippewa Secondary School

School Property

Joint Agreement with City of North Bay and School Boards in order to access indoor and outdoor facilities. This will maximize the beneficial use of these properties while ensuring their maintenance as well. Expires June 21st, 2011

Identification:
- **Type**: School Property
- **Area**: 8.48 Ha
- **Owner**: Nipissing Board of Education
- **Location**: Old City

Information:
- Adjacent to Chippewa Creek & Trail
- Excellent football field
Identification:
- **Type:** City Wide Park
- **Area:** 4.59 Ha
- **Owner:** City of North Bay
- **Location:** Old City

Amenities/Description:
- Natural area along Chippewa Creek with small pedestrian footpaths which have developed over the years going to and from Chippewa High School.

Maintenance Strategies:
- Part of Kinsmen Trail System maintained by North Bay Mattawa Conservation Authority

Program & Community Development:
- Nipissing Botanical Garden organization
- Considering development of linear arboretum and designation as botanical garden

### Chippewa Creek Ravine
Part Lot 4, Lots 5-8, Plan 97
Joint Agreement with City of North Bay and School Boards in order to access indoor and outdoor facilities. This will maximize the beneficial use of these properties while ensuring their maintenance as well.
Expires June 21st, 2011
Identification:
- **Type:** Parkette
- **Area:** 0.35 Ha
- **Owner:** City of North Bay
- **Location:** Old City

Amenities:
- Picnic Areas, Kinsmen Trail

Maintenance Strategies:
- Trail head sign
- Tree planting

Program & Community Development:
- Flood plain, prone to flooding each spring

**Fisher Street Parkette**
Part Lot 4, Lots 5-8, Plan 97
Identification:
- Type: Neighbourhood Park
- Area: 1.66 Ha
- Owner: City of North Bay
- Location: Old City

Amenities/Description:
- Natural park areas. Metcalfe portion includes unopened streets with level natural areas
- Trail linkage opportunities form Kinsman Trail through Metcalf Park to Laurier Woods

Maintenance Strategies:
- No plans have been made to develop these areas. Check circulation.
- Forestry Plan

Appendix C – Sustainable Community Committee Principles
Part Five: Natural Features & Environment

Parks, Open Space & Trails

On December 13, 2005, the second SCAC meeting was held. A total of twenty (20) people attended. A copy of the exercises and results can be found in Appendix C.

The purpose of this meeting was to identify the existing issues relating to natural features and the environment, as well as parks, open space and trails; and for SCAC to develop sustainable community principles for these topic areas.

Natural Features and Environment

FoTenn presented information on the Planning Act; the 2005 Provincial Policy Statement (PPS), in particular the new Policy areas on Public Spaces, Parks and Open Space, and Energy and Air Quality; and the provincial and local planning framework.

City Staff highlighted the existing Official Plan policies and highlighted the following major Official Plan Amendments:

- 1987 – OPA 34: Floodplain erosion areas
- 1992 – OPA 60: Trout Lake water quality
- 1992 – OPA 64: Revisions to floodplain
- 1997 – OPA 71: Various sections including environmental policies. (*Note: This OPA has not been approved by the Minister of Municipal Affairs and Housing)
- 2003 – OPA 78: Trout Lake watershed policies through an Ontario Municipal Board Decision

In addition, City Staff discussed that there are a number of current and emerging issues that will be considered in the new Official Plan. These issues include:

- Provincially Significant Wetland at the south end of the City. The linking of Highway 11 into Ferris would traverse through the wetland complexes.
- Renewable/Alternative Energy Resources
- Source Water Protection
- Brownfield Revitalization
- North Bay Escarpment
- Trout Lake and Lake Nipissing watersheds (cross-boundary matters)

Furthermore, City Staff advised that a landscape plan for the Escarpment would be considered given the concerns over what areas of the natural feature can be developed and where development would be prohibited. The SCAC members raised a concern regarding the need to define the boundary of the Escarpment and to determine the toe and brow of this natural feature.
The first exercise consisted of 5 break-out groups, whereby each participant “role-played” a golf course developer, municipal planner, president of a community association or a representative from the Conservation Authority. The exercise was to discuss in the respective roles a proposed golf-course development and whether it should be developed. This was a fictitious exercise and was intended for the SCAC members to draw on the PPS policies that were highlighted, to identify environmental concerns and to develop sustainable community principles or objectives to address each concern. See Appendix C for details.

Following the group’s results, the SCAC members were asked to identify themes, which were the following:

<table>
<thead>
<tr>
<th>Themes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stormwater Management</td>
</tr>
<tr>
<td>Wetlands</td>
</tr>
<tr>
<td>Floodplains</td>
</tr>
<tr>
<td>Brownfields</td>
</tr>
<tr>
<td>Monitoring</td>
</tr>
<tr>
<td>Economic Viability/Feasibility</td>
</tr>
<tr>
<td>Tax Implications</td>
</tr>
<tr>
<td>Wildlife Habitat</td>
</tr>
<tr>
<td>Riparian Zone</td>
</tr>
</tbody>
</table>

Once the themes were identified, the SCAC members identified objectives for each theme as follows:
Objectives for Natural Features and Environment

Stormwater Management
- Minimize impact of stormwater runoff on adjacent lands.
- Require developers to provide information or studies on existing hydrology and stormwater.
- Require developers to demonstrate how the development might impact on stormwater and how it can be mitigated.
- Require developers to provide stormwater plans as part of the development application submission.
- Proactive approach from the City on monitoring enforcement.
- Manage stormwater on site with no impacts on neighbouring lands or water.
- Prevent erosion.

Wetlands
- Protect riparian zones
- “Development and site alteration shall not be permitted in:
  - significant habitat of endangered species and threatened species;
  - significant wetlands in Ecoregions 5E, 6E and 7E1; and
  - significant coastal wetlands.” (PPS 2.1.3)
- “Development and site alteration shall not be permitted in:
  - significant wetlands in the Canadian Shield north of Ecoregions 5E, 6E and 7E;
  - significant woodlands south and east of the Canadian Shield;
  - significant valleylands south and east of the Canadian Shield;
  - significant wildlife habitat; and
  - significant areas of natural and scientific interest
    - unless it has been demonstrated that there will be no negative impacts on the natural features or their ecological functions.” (PPS 2.1.4)
- Provide 120 m buffer-development permitted under specific study
  - Recognize that wetlands are above 5% parkland dedication dependent on type of wetland.

Floodplains
- Regard for provincial regulations.

Financial Implications
- Consider financial implications to the City.
  - Access federal/provincial grants where possible.
  - Require business plans that are acceptable to the municipality.

Brownfields
- Provide independent studies on brownfield contamination.
- Rehabilitate brownfields.

Wildlife Habitat
- Conserve natural features
  - Consider and protect wildlife corridors in plan preparation to minimize disturbance to the wildlife habitat and wildlife movement patterns.
Waterbodies
- Minimize impact on waterbodies ensuring no contamination of creeks and lakes.
- Protect water quality and quantity (PPS 2.2).
- Maintain opportunities for public access to waterbodies.
- Minimize impact on fish habitat.
- Provide appropriate setbacks for all waterbodies depending on characteristics of waterbodies.

Water Source Protection
- Protect water quality and quantity of Trout Lake as a source of drinking water.

Monitoring
- Require monitoring of outcomes and ensure accountability (e.g. performance bonds)

Recreational Pathways
- Provide recreational pathways through natural features (e.g. wetlands, wooded areas), where appropriate.

Recreation
- Provide recreational opportunities for all residents and tourists.
- Consider economic benefits from recreational opportunities.

Aesthetics
- Ensure the development is sensitive to and accounts for the natural setting and incorporates natural features into the design of the development.

Woodlands
- Preserve natural amenity of area as much as possible.
- Protect Laurier Woods.

Escarpmont
- Protect Ottawa Bonnechere Graben Valley (portion of Escarpment)
- Provide continuous greenbelt trail along Escarpment by formalizing existing informal trails and connect to other natural features.
- Protect vistas and skyline (e.g. O’Brien Lookout and Jack Pine Hill) and provide opportunities to view geological features.
Define and identify Escarpment area (top and bottom)
Define and identify Escarpment area (top and bottom)
Protect and preserve Escarpment as defined.
Protect and preserve Escarpment as defined.
Recognize that the Escarpment is a defining feature/landmark
Recognize that the Escarpment is a defining feature/landmark in North Bay.
Protect houses and residents at the base of the Escarpment.
Protect houses and residents at the base of the Escarpment.

Based on what we heard, the following are the draft sustainable community principles for North Bay’s natural features and areas.

### Sustainable Community Principles for Natural Features and Environment

<table>
<thead>
<tr>
<th>Principle</th>
<th>Count</th>
</tr>
</thead>
<tbody>
<tr>
<td>Manage stormwater on site while reducing the impacts on adjacent lands or water.</td>
<td></td>
</tr>
<tr>
<td>Protect natural areas and riparian zones next to lakes and creeks.</td>
<td></td>
</tr>
<tr>
<td>Recognize the potential of brownfield areas and rehabilitate for development where appropriate.</td>
<td></td>
</tr>
<tr>
<td>Protect water quality and quantity of Trout Lake as a source of drinking water.</td>
<td></td>
</tr>
<tr>
<td>Provide recreational pathways through natural features (e.g. wetlands, wooded areas), where appropriate.</td>
<td></td>
</tr>
<tr>
<td>Ensure development is sensitive to and accounts for the natural setting and incorporates natural features into the design of the development.</td>
<td></td>
</tr>
<tr>
<td>Preserve the natural amenity of areas as much as possible.</td>
<td></td>
</tr>
<tr>
<td>Protect the Escarpment by defining the area to be protected, protecting vistas and skylines, providing a continuous trail and ensuring that development takes place in appropriate locations.</td>
<td></td>
</tr>
<tr>
<td>Protect/enhance and provide public access to the natural aesthetic views and vistas of and from significant natural features such as Trout Lake, Lake Nipissing, other lakes and the Escarpment.</td>
<td></td>
</tr>
</tbody>
</table>

Ensure that development on the Trout Lake watershed conforms to the long term watershed plan whose purpose it is to protect/enhance the long term water quality of the reservoir, to protect and enhance the biological integrity of the ecosystem, and to protect and enhance the aesthetic quality of the Trout Lake reservoir.

### Parks, Open Space & Trails

City Staff presented information on past and recent studies on the City’s recreation and parks systems, as well as the policies in the Official Plan regarding recreation and leisure. Some of the studies that were highlighted were the 1994 Discovery Routes study; the 1991 and 2005 recreation studies, which resulted in many recommendations. One of the recommendations was for the City to establish agreements with school boards for the use of the recreational facilities. City Staff advised that some agreements have been made with the school boards.

The second exercise involved an interview where each person acted as a reporter and an interviewee. The purpose was for the SCAC to identify both positive and negative issues with the existing parks, open space and trails in North Bay and to propose solutions to the issues. (See Appendix C for details)

At the end of the exercise, the SCAC voted individually on the solutions that were of importance to them. The number in the brackets identifies the responses. The following are the results:

#### Proposed Solutions

- Overall Plan that ties in parks, open space, trails and facilities on developed and undeveloped land (14)
- City commitment to maintain parks and trails (9)
As a result of these identified solutions and priorities, the following draft sustainable principles for Parks, Open Space and Trails were developed:

- Bigger tax base (8) *
- Multi-use facilities (7)
- Public education on the value and care of parks and trails and facilities (6)
- Better communication between agencies (5)
- Build indoor and outdoor facilities (4)
- Need better signage (3)
- Limit machines and bicycles (3)
- Think long term (3)
- Need policy on maintenance (2)
- Sustainable workshops with Council and developers (2)
- Limit liability (2) *
- Improve awareness of what’s there (2)
- In heavy use area need alternative trails (1) *
- Appeal to partiers for consideration (1)
- Private sector funding (1) *
- More money (1) *
- More sports facilities on waterfront (1)
- More volunteers (1)
- Better negotiation for land from private sector (1) *
- Increase government and public contribution (1) *
- Additional parks for younger people (1)
- Need a policy on who can use parks and trails (0)
- Linkage systems and protected areas (0)
- Provide co-ordinator to manage special interest groups (0)
- Enhance trails (0)
- Acquire linkages (0)
- Develop snowmobile links (0)

(Note: Those comments marked with an asterisk (*) are important comments and are larger municipal issues that require further discussions external to the new Official Plan process)
### Sustainable Community Principles for Parks, Open Space and Trails

- Develop a vision and a comprehensive plan that protects and links existing and future parks, open space, trails and facilities on both developed and undeveloped land.
- Provide multi-use facilities and maximize opportunities to accommodate a wide range of sport, recreation activities and users.
- Develop a comprehensive trails system that is appropriate for a variety of uses.
- Develop a snowmobile trails system as recreational and tourism opportunities.
- Encourage the Department of National Defense to allow access to their trails and maintain a Good Neighbour Policy in terms of trail use.
- Develop where appropriate bike paths/lanes in road right-of-ways.

Participant List 30
First and foremost, the City of North Bay would like to thank the individuals who participated in Saturday’s Planning Charrette (June 14th, 2008) session at the Capitol Centre’s Galaxy Room. Their time, effort and knowledgeable input is much appreciated, and will assist the City’s capability of coming up with a plan that not only reflects the public’s needs and desires, but supports North Bay’s initiative of providing the best quality of life achievable for the residents of North Bay.

Thank you for your time and cooperation.

Sincerely,

________________________    __________________________
Jamie Houston    Ian Kilgour
Director of Parks, Recreation &   Manger of Planning Services
Leisure Services
Introduction

As presented to Planning Charrette Participants
I. **Vision of Sustainable Communities Committee**

To date, a wide and strong consensus has been expressed by the citizens of North Bay to build on North Bay’s quality of life strengths. To continually improve a high quality of life by good land use planning, the following guiding principles have been developed for this Plan:

North Bay is a City where:
- individuals and families can enjoy a safe, healthy and secure quality of life;
- employment and education for all levels of qualification will be provided; and
- development that enhances and protects the natural environment and cultural heritage will be encouraged.

II. **Definition of an Official Plan**

- legal document approved by council and the province
- long range planning (20-25 years)
- reflects a communities vision for future land use change and development
- policy framework to make day to day land development decisions
- Describes goals, objectives and policies that guide future physical development of a community while taking into consideration important social, economic and environmental matters and goals

III. **Trails and Active Transportation Strategy 2008**

- Passed by Council February 2008
- Expands beyond traditional trails to include urban non-motorized transportation corridors such as sidewalks and bike routes
- Encourages citizens to use local transit systems
- Goals of the Master Plan include:
  - Integrate Trails & Active Transportation
  - Trail Co-ordination and Planning
  - Linkages
  - Capital Budgets
  - Trail Standards
  - Trail Consultation Marketing and Promotion
  - Safety & Environment
  - Partnerships with Tourism and Economic Development
  - Trail Interpretive Information

IV. **Parks Plan Update 2008**

- Currently being updated
- Offers an up-to-date inventory of parkland within the City
- Addresses socio-demographic trends that affect the use of parkland, such as aging
- Compares the actual parkland with standards listed within the 1991 Parks Plan, as well as other Northern Ontario Communities
Currently attempting to identify problem areas through the use of this Planning Charrette

V. Basic Demographics

- **Population 2006:** 53,966
- **Projection for 2033:** 60,000 (27 Years)
- **Projected Annual Growth Rate:** 0.31%
- **Average age in North Bay:** 49
- Percentage of 65+ is anticipated to represent 21% by 2031
- Largest proportion of people live in West Ferris (22.2%)

VI. Concept of Park Levels

**Parkette**
- Small area of land used for decorative purposes and/or passive recreation
- Associated with city monuments, fountains and ornamental pockets of lands
- Located along street intersections and major corridors

**Neighbourhood Park**
- Designed to accommodate neighbourhood interests
- Should be centrally located
- Safe and convenient walking distance (5 minute walking distance)
- Should be coordinated with public/private schools where possible

**District Park**
- Accommodate social, cultural, educational & physical activities of several neighbourhoods
- Major emphasis on facilities for organized sports
- Should be centrally located (20 minute walking distance)
- Should coordinate with secondary school sites where possible

**City Wide Park**
- Developed for the enjoyment of a diversified population
- Active and passive recreation
- Should be widely distributed throughout the municipality
- Should be multi-purpose in design or contain specialized uses

VII. Task for the Day

The task for today is to split up in 8 groups to represent the 9 planning districts. The Old City & CBD have been combined for the purposes of today’s session.

1. Read the material on your table and review the mapping provided to familiarize yourself with the existing parks and trails located in your secondary planning district
2. There are 4 questions on the sheets attached for you to consider as you review the Parks and Open Space:
   - which secondary planning districts meet the current and future needs of parkland;
   - which type of parkland is needed;
   - where it should be created within the planning district; and
   - are there any possible linkages that can be made with trails?
3. Do not hesitate to ask a City representative for assistance (i.e. more detail, background)
Results from the Planning Districts
General Comments/Suggestions

- Schools and playgrounds in this planning district are well used by citizens.
- There should be more of a thought process in park dispersion.
- There is quite a bit of development on the escarpment, especially in the north part of this district. This should stop.
- City wide park activities are poor. There should be playground activities for teenagers such as health pit stops for exercising. A good location to try this would be Thomson Park.
- There isn’t much room for new parkland therefore current parks and open space should be enhanced.
- The inventory of trails/parks that exist and the titles and names of creeks/riverways should be marked and made more evident to people. Hiking and biking trails should be advertised prior to adding more parkland. Chris Main’s idea of “use it or lose it” was brought up.
- There are currently signage issues at parks within this planning district. There should be similar indication signs for all parks. A suggestion was made to use Native Traditional Artwork Design.
- The City should acquire more private land to keep as parkland, more specifically the Orsi land adjacent to the proposed new highway that is currently referred to as Beaver Pond Park.
- A new road by Laurentian Playground should be created. It would act as an exit off of the highway and would eliminate the highway going through the wetland.
- City should offer more water fountains along trails and parks. This would eliminate the need to carry a water bottle and consequentially result in less garbage on the ground.
- There is no sidewalk on Dellandrea and Rancier however there is a major need for sidewalks for the kids to walk to school safely.
- The City should provide more information on how trails will be development along roads. This is not clear.
- Snowmobile trails are often used for mountain biking; thus serving a dual purpose.
- There is a need for more parkettes within this district. Good locations were near the hydro line and possibly one by the overpass on Trout Lake.
- The corridor from Ski Club to Trout Lake Road allows wildlife to access the city. The City should plan accordingly to decrease the amount of accidents on highways/roads.
- There should be a linkage to a pedestrian overpass.
- There should be underpasses created with the new highway to act as migratory routes for wildlife. This will allow them to safely get around a busy street. It could consequentially decrease the amount of accidents that may occur without it.
- The City should identify location of locally significant wetlands. It is understood that not everything wet should be designated wetlands. The Conservation Authority regulates
the wetlands and is currently working on a set of policies. In order to identify a locally significant wetland, five tests need to be conducted.
- Maps should have been showing Provincially Significant Wetlands.

**Specific Comments/Suggestions**

- The **Escarpment East Property** is already being developed (specifically the street between Surrey and Ski Club Road).
- **Graniteville Park** is well liked by the districts residents.
- The City should advertise **O’Brien Street Park** – it is currently not well known and thus not used to its fullest potential.
Representatives: Roy Summers
Peter Koch

General Comments/Suggestions

- The planning district does not meet the current needs for parkland. It is in need of all types of parkland; parkette, neighbourhood, district and city-wide.
- Trails do exist but there is limited knowledge of access points. Bike and walking trails to parks would be helpful to increase usage.
- There are some residential areas that are not linked.
- More parks would be desired however there are limitations due to less land being available.
- Should use the heritage aspects within the parks for potential tourism opportunities.
- Some parks are not signed or publicized. The City should formulate an inventory of which ones are and are not signed in order to correct this issue.
- The east side of Booth road shows opportunity for parkland. The existing railroad beds could be developed into a trail.
- Laurier Woods could connect to the old rail bed, making it readily accessible from Ferris rather than solely the Old City.
- Potential trail linkages include:
  - from John to Nip. Junction
  - the Great Lakes heritage coast trail; which offers excellent walking opportunity
  - the Fire Hall-CPR bridge; which gives you an opportunity to get to Old Callander Road (a potential alternate way to get into West Ferris)
- There is green space available between Thelma/Bunting Drive
- The snowmobile trails should become a multi-seasonal trail system for bikers and walk/runners.
- The ONR property south of Laurier Woods is another excellent opportunity for parkland.

Specific Comments/Suggestions

- **Lee Park** is currently used at capacity for intercity sports. Outside of this park, there isn’t anything else available within this planning district.
- **Marshall Avenue Park** could be expanded as there is land available. This property should be developed into parkland. It is central and a great location.
- The City needs to make a more efficient use out of the beach access roads. They are important to preserve and enhance.
- A trail that would access **Parks Creek Park** should be promoted.
- The City needs to discover what the potential uses are for **La Vase Park**. There are terrific day camping opportunities here. A bridge to cross over river should be developed.
- **La Vase Park** was expropriated by the city 40 years ago; it used to have cottages. The north end of the park had an access road, but it is now closed. The road goes over 700-800 metres of Provincially Significant Wetland. The development of La Vase Park has not been a
priority, which is why nothing has come about on the property. When the waterfront park opened, attention towards La Vase Park switched. The City recognized that a pool and sport fields are needed more than passive recreational parkland. This is what they put their money towards. It is currently being used but isn’t formally being used.

- The property south of Laurier Woods should be designated open space and should be made apart of Laurier Woods.
- There is the possibility of placing an EcoCentre at the old Publique Heritage school site and attaching the back property to it to get to the water tower.
- The area behind Mariah and Thelma Avenue at end of Bunting Drive, there is the potential for an extension to Kate Pace.
General Comments/Suggestions

- There is a need for back lanes within the city. The back lanes could be used as a pedestrian walkway to get to and from parks safely, without using streets.
- Some parks within the city do not need to be groomed. Sometimes, an open space will do.
- Properties should not be stripped when development occurs. Leaving some mature trees would not only save a tree, but enhance the aesthetics of the area. *One Kids Place* is an example of development that stripped the entire land when trees could have been maintained. This could be done through the use of the Official Plan or the Zoning By-law.
- Additional parkland is required within this planning district.
- Currently, there are people who create a skating rink on the bog/marsh land beside the highway. There is the potential to recognize and designate this area as parkland to keep it better maintained.
- Another location for potential parkland is where the old sugar shack is located. There are mature trees and great lookout from this property.
- Possible trail linkages include:
  - A link to the Kate Pace Way, potentially through Oakdale and McKeown. It would be great to get to the Davedi Club and connect to the trail that way.
  - A link to Escarpment which goes through the cemeteries and again connects to the Davedi Club access point of the Kinsmen Trail.
- New development should be required to donate a larger proportion of parkland, not only five percent.
- Parks and open spaces should have a four season approach. There should be identified uses within the winter months.
- There should be a green buffer to hide the industrial and highway commercial development when traveling into the city from Highway 17 East.
- There should be safer access points to cross highway 11 and 17. Crosswalks or under/overpasses should be introduced.
- In North Bay, due to our heavy snowfalls, it is difficult to have shade trees along roads. They usually do not survive the snow plows, salt, compaction, and other issues.
- 200 feet is the standard that people will walk in order to get to a commercial building. If the walk is any longer, the elderly need park benches between the commercial building and where they parked in order to sit if they get weak.
- The City should prepare a long range plan for Parks. Staff for Parks, Recreation and Leisure Services would have to increase in order to maintain potential trails and parks. Council should understand the need for parkland as one of the most important features of a city. The idea should be supported by council.
There should be a buffer around creeks.
There should be protection of migratory routes for animals that use the escarpment and trail corridors.

Specific Comments/Suggestions

- **Belleview Park** currently offers a new playground and tire swings. It is situated in a high residential area and is currently under-utilized. It needs a year round program; which would include a rink, trees for shading, basketball pad, etc.
- **Trussler School** offers a senior playground which needs a lot of work, as well as a junior playground which should have a covered sandbox. Trees should also be provided to shade equipment and swings.
- **Black Forest Park** should be advertise as an eco-classroom facility and should offer well maintained parking and public washrooms. Menard sometimes goes up with schools to teach the children about the environment. It would be great to make this a year-round activity.
- **Escarment West Property** should offer a trail from the DND property to the college facility. Access points are needed. A creative brochure could be produced to identify access points to these trails.
- There are currently no parkettes within the planning district. There is the potential for a parkette at the corner of Cartier/Champlain
- At Hearst/Leonard/Justin, the highway drops off. It would be nice to beautify this area.
- It should be noted that **Mapleridge Park** could be used by people other than those in the neighbourhood since it is located directly off of Highway 11 North.
- The **escarpment** should be wider and owned by the City.
- **MTO property @ Airport and Highway 11** should be green space and the MTO should help maintain it.
**General Comments/Suggestions**

- There should be a larger buffer around creeks.
- There should be designations between wetlands.
- Gravel pits should have to protect creeks & open space.
- Many trails are not and should be inventoried. They do not need to be maintained, but should be documented.
- The railway lands behind Laurier Woods should be used to expand the conservation authority owned parkland.
- La Vase Portage needs to be maintained and the damages of the past repaired where possible.
- A Forest Management Plan should be put in place to retain wildlife and increase access to open space areas.
- Natural area parks that aren’t developed should remain that way.
- There should be more urban trees throughout the city. The City should look at other technologies and cities to find out how to best utilize them.
- The wording of undeveloped areas should be changed. Land that is not developed should be called “green space”.
- The current park designations should consider the ecological value of land and water to the city.

**Specific Comments/Suggestions**

- The south west piece within **Otter Lake Park** should be designated open space. It is legal parkland. The City should be putting the entire park back into the inventory.
- Additional parkland should be located on large property owned by Astonwood Investments Ltd. (adjacent to **West Peninsula Road**).
- A connection from La Vase Portage to Mattawa River parks should be created.
- Historical significant locations should be documented and publicized on trails.
General Comments/Suggestions

- In the area within Algonquin/Highway 17/Clarence/Bloem, there is not much green space available.
- The proposed joint agreement with ESCA needs to be more publicized. The public needs to know who to contact to book games.
- Algonquin Avenue, being a busy street, is difficult to get across. There are only two safe intersections; one at the Esso gas station and at the other at the end of Jane Street.
- The Beach Access Roads within this planning district should be designated as parkland.
- The railway right-of-way should be made into a trail connection.
- There should be a park at the new hospital. Natural aesthetics is a part of healing.
- The school board agreements with the City should be made more publicly available and more clear and understandable.
- School parkland areas should be enhanced. Current school parks are lacking many features.
- The parkette at Jane and Cormack is no longer a garden or treed area. This has been changed to simply an empty space. This area should be enhanced.
- Bicycle paths that were created to encourage a new mode of transportation should be separate from walking trails.
- There are numerous traffic concerns in the Pinewood area that should be dealt with. A Comprehensive Traffic Plan should be developed for Main Street West between Murray and Gormanville to:
  - widen it to accommodate 20 year growth; and
  - to resolve existing land use conflicts between industry, residential and transportation.
- The City should explore ways of enhancing the use of Jet Avenue to resolve traffic parking difficulties on Main Street.
- The top and bottom of Jane are wide, however there is a remaining section where the setbacks are not as far back and the street is narrow. This needs to be addressed prior to the opening of the new hospital.
- With the possible redevelopment of current hospital sites, parkland should be added.
- Orsi land at west end should have natural areas preserved.

Specific Comments/Suggestions

- **Sweetman’s garden** is a topic of a private agreement. This should be something the city purchases.
- **Kinnette playground** is well used however the crossing at Jane Street is difficult. A pedestrian crossing should be created.
- **Kinsmen Beach** is an important park as it is used year-round for activities such as tobogganing, walking and sunset watching. It however, is in need of trees and shrubs to act as a fence line buffer. This would provide a visual and noise buffer between park and rail/traffic impacts. Also, the existing foot path from Kinsmen Beach to the motherhouse should be formally recognized and designated. There is a possibility of linking this trail with the Jacques Cartier Parkette.

- **Pinewood Public School** has the potential to improve and increase walking and biking opportunities.

- **King George Public School** yard needs landscaping and aesthetic enhancements. Communication and cooperation between school and City is necessary. Proposed dedicated bike lanes via McIntyre Street West and Copeland should be encouraged as it is a Traffic Control Area.

- **Ecole St. Paul** is in need of landscaping. Trees and shrubs should be added to enhance the outside boundaries of this facility.

- **Ecole Secondaire Catholique Algonquin** has a potential special agreement that needs to be better publicized. When ESCA acquired the land, it was a big loss of accessible green space. It is currently fenced, gated and locked. The school should offer more information and communication regarding opportunities for use by established groups for formal, scheduled sports like soccer games. There should be more opportunity for use and access for informal recreation (i.e. running, Frisbee).

- **Jacquie Cartier Monument** creates an opportunity for a trail access towards Kinsmen Beach. It is currently stuck in the middle of traffic. Linking walking and bike paths to the Beach Access would improve the access of this parkette.

- **Kinette Playground** is a great, well-used children’s playground. It should be linked to new bike/walking paths to increase usage even more. There are opportunities for trails from the remaining sections of rail bed. As mentioned above, it is very important to provide safe, well-designed pedestrian crossing across Jane Street.

- **Kennedy Park’s** walking paths needs to be preserved, enhanced and promoted to improve walking access from Pinewood School to residential areas and other trail networks, such as the Kate Pace.

- **Bourke Playground** should receive benches, playground facilities, trees and landscaping to make it more attractive and encourage use by surrounding families.
General Comments/Suggestions

- Green space should be signed so that people can identify where it is.
- Wood chip paths should be encouraged.
- The City should create an inventory of the parks and open spaces that are not clearly signed or accessible, and fix these issues.
- There are some maintenance issues at some parks within this planning district.
- The City should sign trails and paths to indicate the level of difficulty.
- There should be a dock off of Circle Lake for the purpose of fishing. Boating should not be encouraged. This could also lead to a potential boardwalk along the lake. It should be wheelchair accessible.
- Not all paths have to be lighted, however those that are most used, should.
- There should be more connections between schools and the park areas.
- There is currently a safety issue in some of the trails.
- In no case should the City allow high rise development on the lake to take place. Blocking the view of the lake should not be allowed.
- There should be an inventory created, describing the ecology and the habitats in various green areas.
- In some cases, the need to develop open space into parkland is not necessary. Passive recreation should be encouraged to better suit the needs of the older adults. Keeping the areas natural would also address ecology and habitat protection.
- Where neighbourhoods with different ages co-exist, multi-generational use should be encouraged.
- There should be some commitment from council to maintain the pathways and boardwalk.
- For those who do not have front yards within the affordable housing section of this planning district (owner prohibits the use of their front yards), creating community gardens should be considered. If possible, partnerships should be arranged with the school boards to use some of their land. It would also be a learning experience for the children.
- Green space in cul-de-sacs should be encouraged, except where uphill.
- The proposed linkages should be supported.
- The Beach Access Roads should be designated into parkettes, and be maintained by the City of North Bay. Current encroachments should be removed.
- The City should increase the amount of staff for Parks and Recreation.
- Some parks need more lighting and beautification to take place.
- The existing playgrounds and park areas should have shelters or community centres.
- The city should add more park benches to their current supply of parks.
- There are numerous maintenance issues within the parks of this planning district.
Specific Comments/Suggestions

- **Circle Lake** should have a dock and boardwalk to connect Sage Road around Circle Lake to Wallace. There should also be a proposed sidewalk to Commerce Court. The boardwalk along Circle Lake would continue to Birchhaven Park playground, and should be made wheelchair accessible.
General Comments/Suggestions

- There are hardly any parks in the south side of the Old City. Most of the parks belong to the schools.
- The schools should become more landscaped to appeal to the majority of people rather than just children. Parks made for seniors must be taken into consideration, especially with a growing older population.
- Thomson Park and Chippewa Creek Ravine are good for the area.
- There is geocashing potential within the city. The City should have an activity on the website where you get coordinates and need to locate certain parks within the city. This could allow the residents to discover parks they never knew about.
- Within the entrances of trails, there should be signs/maps stating “you are here”, and perhaps details about what you are going to see in the park and how you can connect to other parklands. These should be uniform throughout the city.
- Gazebos should be added within the majority of the parkland. It instantly makes the parks more passive. This should be considered within the neighbourhood parks.
- Toronto, being a very cultural city, has encouraged cultural areas within their parks by adding baking ovens to bake breads on the weekends. This is something the City of North Bay could do; however it should reflect a more northern culture.
- Parks should have a social use instead of something you would just stop at quickly.
- There is a need for more neighbourhood parks.
- Trees and benches are required for older adults.
- The City should use existing trails for organized runs.
- The City needs to add features within parks to help people gather.
- Parking lots should have more green buffers. Adding trees, grass and gardens should be required for parking lot development form now on.
- The Emerald Ring in Cleveland should be used as an example for connectivity of our parkland. Our trails should connect the Old City/CBD parks in a circle, leading down to the waterfront.
- Garbage cans and water fountains should be more attractive and available throughout the city.
- The City should provide better washroom facilities at parks that are maintained on an ongoing basis.
- One building along Main and Oak Street should be demolished and greened in order to act as a pathway to the waterfront. It would disrupt the feeling of urbanism by bringing nature back into the city.
- The City should add more bike lock stations. In order to make them more aesthetically pleasing, they could be designed by local artists. Snowmobile lock ups should also be introduced.
The shoreline of Lake Nipissing should be cleared during winter months to offer the residents a skating rink (somewhat similar to Ramsey Lake in Sudbury).

Parkettes could be created by using single house lots.

Recycling should be offered in parks.

The City should think of the entire CBD as a large park. Offering more trees in this area would give the downtown the feeling of parkland.

There is the potential of rooftop gardens, green roofs or rooftop cafes within the downtown. The City should take advantage of this.

The city should create a celebration of green businesses downtown and encourage stores in various ways to be green.

**Specific Comments/Suggestions**

- **City Hall Parkette** currently has an empty “pond”. The City should fill in the “pond” and possibly offer a farmer’s market here.
- **Third & Sherbrooke** has the potential to be a nice park.
- Near the **Burrows Store**, there is land that could be designated open space (old railway bed).
- The **Pro-Cathedral** should offer green space in the back of the church where the parking lot is proposed.
General Comments/Suggestions

- There is currently no district park within this planning district. A district park should be encouraged in this area.
- There should be a pedestrian friendly linkage down the hill.
- The Greenhill/Pearce/Pipeline areas need neighbourhood parks.
- The creeks should have a natural buffer to act as protection.
- The escarpment should be protected as much as possible.
- The natural features of this area should be protected from adjacent gravel pits.
- There should be trails on Lees Road.
- The DND trail should link through their properties to Hornell Heights. There should be a trail along Johnson Creek that also links to Hornell Heights.
- The City should encourage an active transportation link to those who will work in the proposed industrial lands by the airport.
- The proposed industrial areas should be landscaped with natural areas for employees.
- Low-density minimal impact development should be promoted below the lookout.
- There are no parks along Anita Avenue. This should be addressed.
- There should be a trail along Chippewa Creek.
- A tree by-law should be created, enforcing developers to not cut down all trees during development of all types of buildings. This would add character to the new subdivisions.
- The City does not promote North Bay as one with 30 lakes. This should be done.
- The upper areas of Chippewa Creek have trails that should be noted.

Specific Comments/Suggestions

- **Greenhill Park** is an ideal model for a neighbourhood park.
- **Fricker-Wallace Park** needs better signage.
General Parks and Open Space Concepts
Developed During the Planning Charrette 2008
1.0 **Designated Parkland**

1.1 The City should think thoroughly about park dispersion prior to allowing development to occur.

1.2 Parks should offer a social use. Picnicking, concerts by local musicians, theatre group performances, etc. should be encouraged by the City.

1.3 The City should encourage and create activities such as exercise classes and organized runs at current designated parkland to promote a more healthy and active lifestyle.

1.4 The City should generate an inventory of all parks that do not have an identification sign and appropriately assign them one. The signs for each park should be all uniform and designed by local artists.

1.5 The City should ensure that neighbourhood parks are safe and easy to access. To do so, sidewalks and pedestrian crossings are needed along busy streets.

1.6 The City should encourage and generate more district parks within the Airport Heights, Cedar Heights and Rural planning districts.

1.7 If there is any history related to designated parkland, the City should make an effort to clearly describe it on plaques at the park location.

1.8 The City should donate land south of Laurier Woods to the park.

1.9 Natural and passive recreational parklands should be encouraged by the City.

1.10 Park benches and gazebos should be introduced to parks and open space to encourage multi-generational use of these areas.

1.11 The idea of a four season approach to parkland should be executed at all time.

1.12 Current parkland designations should take into consideration ecological values of land and water.

1.13 Beach Access Roads across the city should be designated parkland. Existing encroachments should be removed from these areas.

1.14 Geocashing activities should be put in place so the residents can discover new trails and parkland throughout the city.

1.15 North Bay’s culture and history should be expressed at designated parklands.

1.16 The shoreline of Lake Nipissing should have a stretch of ice (similar to Ramsey Lake in Sudbury, Ontario) during the winter months that the public can access.
2.0 Urban Development

2.1 A tree by-law should be created by the City to enforce developers from stripping the land when development occurs.

2.2 The development of underpasses on major roads and highways for wildlife should be promoted by the City.

2.3 New residential, commercial and industrial development that occurs should be required to donate more than the five percent requirement stated within the Planning Act.

2.4 Urban trees within the city should be planted. The City should interact with other northern communities to identify how urban trees can be maintained during the winter months.

2.5 The Parks, Recreation and Leisure Services staff should be increased to support the current need for the creation and maintenance of parkland. The City should recognize the importance of open space and thus encourage this request.

2.6 Comprehensive Traffic Plan for Main Street West should be conducted in order to address traffic problem prior to commencing trail development in the area.

2.7 A dock and boardwalk along Circle Lake that continues to Sage Road should be constructed to provide pedestrian access from Wallace to Sage Road. The dock should not be used for boating purposes.

2.8 High-rise development along or near waterfronts should not be allowed in order to protect the current view of our lakes.

2.9 Green space in cul-de-sacs should be encouraged by the City and could be designated parkette.

2.10 The City should ensure that parking lot development have natural features such as grass, trees and gardens to act as buffers to adjacent roads.

2.11 Rooftop gardens and rooftop cafes should be encouraged by the City.

2.12 A celebration should be put in place by the City to encourage green businesses within the downtown.

3.0 Open Space

3.1 The City should create an inventory of local creeks, rivers, ecological features and habitats.

3.2 The City should identify, designate and protect locally significant wetlands.
3.3 A natural buffer around creeks and rivers should be created in order to protect it from water contamination and flooding.

3.4 A Forest Maintenance Plan should be introduced to retain wildlife and increase the access to open space areas.

3.5 The City should not allow any more development on the escarpment to take place. If it must, low density minimal impact development should be promoted.

4.0 Trails & Walkways

4.1 The City should provide water fountains along trails to avoid pedestrians and cyclists bringing water bottles.

4.2 If water fountains along trails are not plausible, recycling bins should be provided for water bottles.

4.3 Access points should be properly marked by the City along with the level of difficulty and any past historical representation. Maps should also be provided on entrance signs in order to plan a destination and get there safely.

4.4 Parks and schools should be better linked within each planning district.

4.5 The old railway bed that exists throughout the city should be considered for parkland and trail designation.

4.6 Current snowmobile trails should be considered a multi-seasonal trail and allow for dirt biking.

4.7 Back lanes should be introduced within new development to act as a safe transportation linkage system for pedestrians to various parks.

4.8 When promoting active transportation within the city, safety precautions should be taken into consideration, and thus pedestrian and cycling trails should be separate.

4.9 For natural unpaved trails, wood chip paths should be encouraged by the City.

4.10 A pamphlet should be created to identify and map all public access trails within the city.

4.11 Solar lighting should be provided throughout main trails to provide safety for users.

4.12 More bike and snowmobile lock stations should be provided and designed by local artists.

4.13 The City should incorporate a pedestrian friendly linkage down Airport Hill.
5.0 Industrial Uses

5.1 Aggregate resource extraction facilities should be responsible for protecting the natural features (i.e. rivers, creeks, forests, wildlife, etc.) surrounding their site.

5.2 New institutional and industrial development should offer parkland for staff and patients.

5.3 Active transportation should be encouraged within the industrial zoned land on Airport Hill. Access to this area via trails should be incorporated.

6.0 School Properties

6.1 Special joint agreements with school boards should be more publicized.

6.2 General joint agreements with school boards need to be more clear and understandable to the general public.

6.3 School parkland generally lacks many features. The City should encourage that these parks be enhanced by adding natural features that would make them more accessible to older adults.

6.4 The trail connections between schools and parks should be enhanced.

6.5 Community garden partnerships with schools surrounding affordable housing would allow for fresh fruit and vegetables to be available to affordable housing units. Having the garden grown on school properties would educate the children on how to grow fruit and vegetables and consequently contribute to the healthy and active living initiative. The City should support this proposal.
Conclusion
In order to keep the Parks Plan Update 2008 up-to-date, it will be revised every five years. At this time, another Planning Charrette will be conducted to seek the neighbourhoods’ opinions of current and future parkland. This will ensure that the City remains on course with the goals and objectives formulated within the Parks Plan Update 2008, and those presented in future Planning Charrettes.

The work completed during the Planning Charrette will be included within the Parks Plan Update 2008 and the new Official Plan. The Parks Plan Update 2008 will be used by Parks, Recreation and Leisure Services, as well as Planning staff on a day-to-day basis. The recommendations included within the Parks Plan Update 2008 will be incorporated within the new Official Plan so that when privately owned lands develop, the City can use its powers under the Planning Act to attain the Parks Plan Update 2008 goals and objectives.
